

Circular economy strategy in France

OUR EXPERTISE

The actions of the Institute are mainly articulated around 4 axes: reflection, advocacy, implementation and circular economy awareness.

ANTI-WASTE LAW FOR A CIRCULAR ECONOMY

ABOUT 200 MEMBERS :

Businesses, public authorities, associations,
professional federations, schools, universities, experts
...

Impact on regulation and reforms : The France's example

- ⇒ Circular Economy Roadmap, April 2018
- ⇒ Law on fight against waste and the circular economy, February 2020

Getting out of disposable plastic (2040)

Better inform consumers

Fight against waste (banning) and for solidarity-based

reuse Extended producer responsibility scale reform

A controversial deposit-return system

- ⇒ To be continued : implementation decrees, Recovery plan and Finance Act for 2021, Climate law 2021

Reinforcement of producers' consumer information obligations

- Creation of a **reparability index** from **2021** and a sustainability index from 2024
- Obligation to provide information on the **availability of spare parts**
- Obligation to affix an **information on the rules for sorting products**
- Obligation to provide information on the presence of **endocrine disruptors** in products

END OF DISPOSABLE PLASTIC

End of disposable plastic in 2040 and other objectives

- ▶ Registration of the **end of** placing on the market of **single-use plastic packaging by 2040**
- ▶ Aim to "move towards" **100% recycled plastic by 2025**
- ▶ Creation by 2021 of a **re-use observatory**
- ▶ **Prohibition of a series of single-use plastic products :** *straws, cutlery, stirrers, sandwich boxes, beverage lids, balloon rods, confetti and steak spades.*

Towards a circular public procurement

- Obligation for public purchasers to buy goods that are **reused or that incorporate recycled materials (20% to 100%** depending on the product).
- **Possibility for public authorities to make donations** in order to avoid waste generation

The missing component of buyer support:

- Availability of LCA tools / circular economy criteria and standard clauses / training of buyers

EXTENDED PRODUCER RESPONSIBILITY

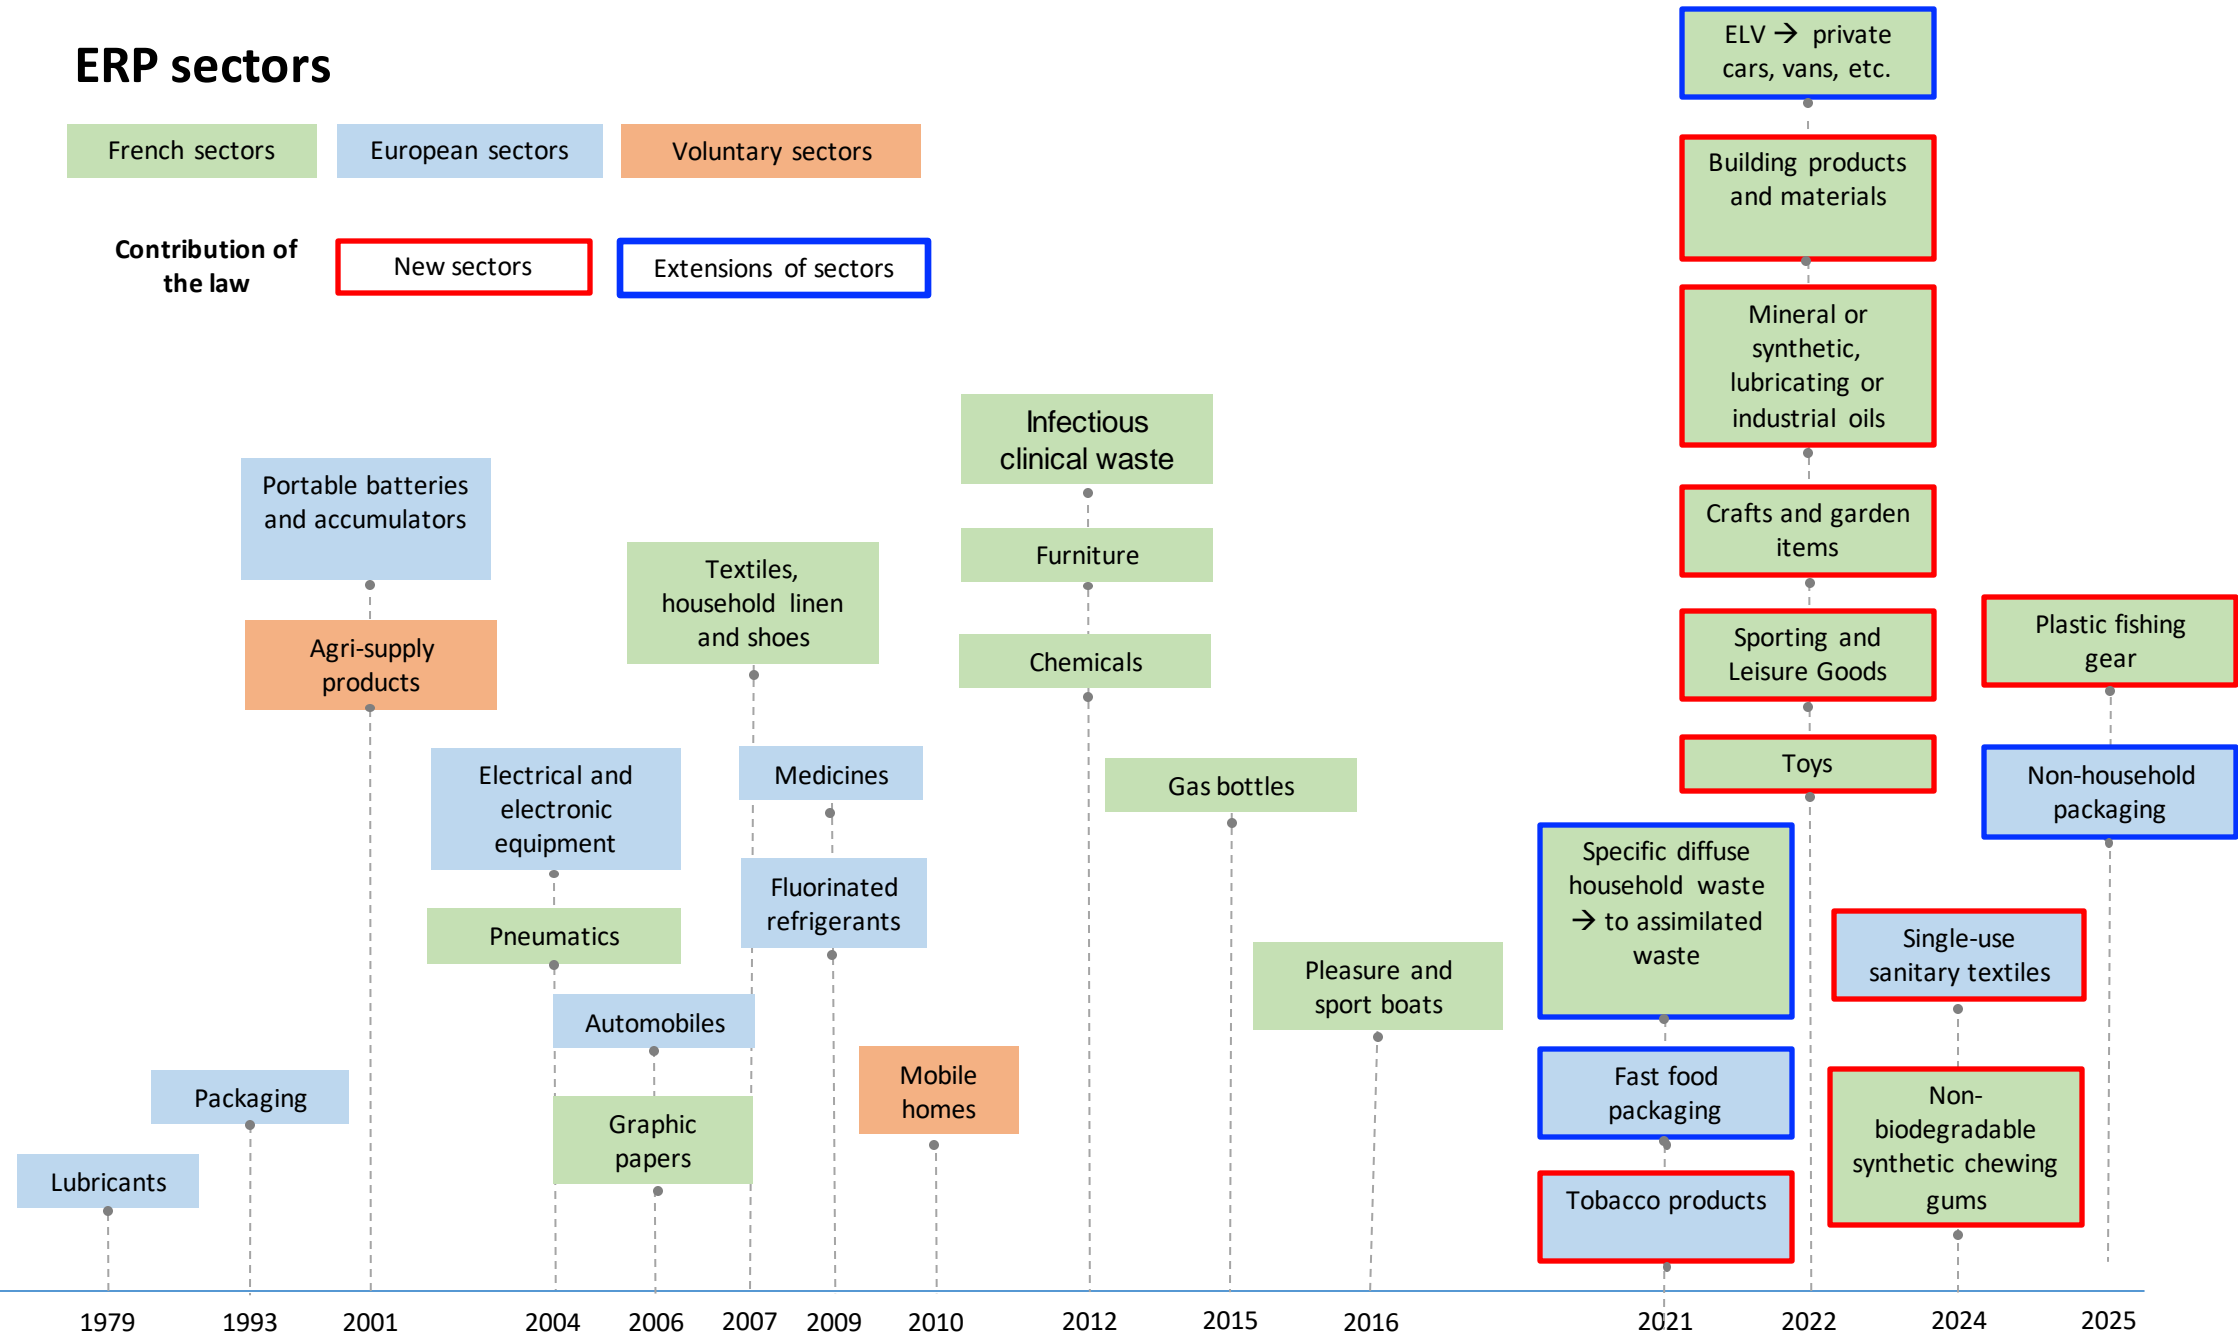

Important reforms in Extended Producer Responsibility (EPR)

- Extension of the missions of the **EPR sectors**
- Modulation of eco-contributions in the form of a **bonus-malus on products' prices**, based on environmental performance criteria
- Creation of **funds dedicated to the financing of repair**, and **funds dedicated to the financing of reuse**
- Creation of a "Stakeholder Committee" for EPR schemes with local authorities, environmental associations...
- **Creation of new EPR sectors and extension of existing ones**

ERP sectors

French sectors European sectors Voluntary sectors

Contribution of the law New sectors Extensions of sectors
